COMP 2015 – Lab 1

Due at the beginning of Lesson 2 to the Dropbox > 'Lab 1' folder on D2L (learn.bcit.ca)

Access to the dropbox folder for Lab 1 will close at the beginning of Lesson 2, so make sure to have your assignment submitted before class starts.

Submission

Write **one .js file** named **firstname-lastname-lab1.js** and submit that file to the Lab 1 dropbox on D2L. For example, if your name is Chris Harris, your file must be called **chris-harris-lab1.js**

Only submit your .js file, **do not include any HTML or images**.

Instructions

The .html file you use to test your script must have:

- **Three images**, with ids 'img1', 'img2', 'img3'

```
<img id="img1" src="…">

<img id="img2" src="…">

<img id="img3" src="…">
```

- A **link to your external .js file** in the **head**

Part 1

Wrap your entire script in a function assigned to the window.onload event.

Part 2

Your script must first prompt the user to enter their first name. The return value from prompt must be stored in a variable called **firstname**. Next, prompt the user again, this time for their last name. The return value from this prompt must be stored in a variable called **lastname**. Finally, concatenate the first name and last name and log it to the console.

Continued on next page…

Part 3

Your script must *get* the **width** of **img1** using any of the methods discussed in class, and *set* the widths of img2 and img3 to that value. **Note: you MUST USE JavaScript to find the width of img1, and you must also use JavaScript to set the widths of img2 and img3. DO NOT HARD CODE the image widths or use CSS!**
